Claim Rejections - 35 USC § 112

Claims 1-12 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which Applicant regards as the invention.

Re claim 1, the "/" mark is indefinite.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-12, are rejected under 35 U.S.C. § 103 as being unpatentable over EP 0690793 to Morrison in view of U.S. Patent #5,135,263 to Terwel ("Terwel" hereinafter). Morrison teaches the application of an image to a porous plastic material to prevent delamination for the purpose of fraud. Morrison does not clearly teach that ink is diffused into the porous layers. Terwel teaches that inks diffuse into a porous plastic material. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to combine the laminate of porous plastics taught by Morrison with the laminate of porous plastics taught by Terwel, because Terwel teaches a method of limiting the absorption of ink into the plastic to 20%, thereby

improving image density.

Re claim 4, Terwel teaches the sublayer which is practically impervious, but not completely impervious.

Re claim 9, both teach the use of heat, and ranges cited by Applicant are well known in the art.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U. S. Patent #4,324,421 to Moraw is cited for showing another card with voids in an inner layer that is designed to resist delamination.
